(commutative algebra ii) is a commutative algebra course for students ranging from undergraduates to  
graduate students at the graduate level. it is designed for students who have had a course in general algebra.  
having experience in general algebra courses is important for understanding parts of this course well. mat7250  
has the modest aim of producing a rapid introduction to the ... **non-commutative symmetric functions ii:

let  $k$  be a fld. often it will be algebraically closed. let  $A$  be a  $k$ -algebra. any  $A$ -module  $M$  becomes a vector  
space. we are interested in the classi cation of nite-dimensional  $A$ -modules, especially in the case when  $A$  is  
nite-dimensional ... **noncommutative localisation in algebraic k-theory ii** - noncommutative localisation

abstract. we provide a self-contained introduction to the quantum group approach to noncommutative  
geometry as the next-to-classical effective geometry that might be expected from any successful quantum  
gravity theory. we focus particularly on a thorough account of the bicrossproduct model noncommutative

261 recall that a ring  $R$  is jacobson radical if for every  $r \in R$  there is  $r \in R$  such that  $r + r + rr = 0$ . every nil ring  
is jacobson radical. **noncommutative geometry alain connes** - alain connes 30 june 1994 paris 6.  
introduction the correspondence between geometric spaces and commutative algebras is a familiar and basic  
idea of algebraic geometry. the purpose of this book is to extend this correspondence to the noncommutative  
case in the framework of real analysis. the theory, called noncommutative geometry, rests on two essential  
points: 1. the existence of many natural ... **operator algebras and non-commutative geometry ii** -  
neumann algebra  $M$  of the free group on infinitely many generators has full fundamental group, i.e.  $pMp$  is
